ARVEN

Minimalist

Minimalistic
and stable

Full nylon
frame

Nylon material is lightweight yet high - strength. The lightweight feature reduces the overall weight of the chair, making the back frame both light and highly durable. It also has a smooth and aesthetically pleasing appearance.

Aluminum alloy back
frame bracket

Aluminum alloy material has high strength and can provide solid support for the chair back, ensuring the stability and safety of the chair, showing the metallic texture and improving the overall grade of the chair.

PV - Adjustment Lever

PV back frame bracket

Within reach

Comfort at your fingertips

PV Armrest

It has a comfortable touch, ensuring it has sufficient softness and a certain degree of anti - slip property. This can prevent the arms from sliding and enhance the user experience. The arc design is ergonomic and can provide good support for the arms.

Aluminum alloy bracket

Aluminum alloy brackets usually adopt a simple design and have a metallic texture. Their lightweight characteristics reduce the overall weight of the chair, making it easier to move and carry, and suitable for use in various environments.

Color - coordinated casters

PV armrest

Lightweight

Lightweight design

Aluminum base

Aluminum alloy is lightweight yet high-strength, making the chair legs both portable for easy movement and highly durable. This enhances the overall grade of the chair, making it suitable for modern office and home environments.

Elastic tilt

Extremely

Extremely
breathable

Breathable
mesh

The high - elasticity mesh fabric allows air to circulate freely, keeping the body dry and comfortable even after sitting for a long time. The 3D three - dimensional weaving structure features fast heat dissipation. The elastic mesh dynamically fits the curve of the buttocks, offering a soft sitting feeling without collapse. The backrest mesh provides micro - elastic support, helping to maintain a natural sitting posture and reduce hunchback.

HOME SPACE.

Working from home often means sitting in front of a computer for a long time, which can easily lead to problems such as back pain and cervical discomfort. A high-quality office chair can provide effective support for the waist, back and neck through ergonomic design, helping users maintain a correct sitting posture.

MEETING SPACE

The design of the comfortable office chair conforms to the human body curve, fits the human body perfectly, provides a comfortable sitting posture, and relieves the pressure on the back and neck. This design ensures that you will not feel tired even if you sit for a long time.

NEGOTIATION SPACE

The Negotiation space is an important place for discussion and decision-making. High quality office chairs can not only enhance the professional atmosphere of the meeting, but also keep participants comfortable during long meetings and promote interaction and communication.

SIMPLE STAFF SPACE

A high-quality office chair can provide effective support for the waist, back and neck through ergonomic design, helping employees maintain correct sitting posture and reduce muscle fatigue and bone pressure.
